Subject: Information on Arkema Chemical Crosby Plant

The Air Program Liaison at TCEQ (Amancio Gutierrez) reported TCEQ currently does not have any current or pending investigations for Arkema. Arkema received

an Administrative Order in April 2017 (attached) for an emissions event that began on June 11, 2016 and lasted 62 hours (4800 lbs. of isoamylene from the Isoamylene Tank Flow Meter Bleed Valve). The company completed corrective actions by June 17, 2016.

TCEQ emergency response staff is currently working with the facility. Also attached is an email describing TCEQ's coordination with the facility and emergency response agencies as 10:08 PM last night. This email contains a link to press releases by Arkema:

<http://www.arkema-america.com/en/social-responsibility/incident-page-2/>

I'll provide any updates.

Thank you,

Toni Allen
